## ABOUT SAMEN KWIEK

Gelderland-Midden has over 650.000 inhabitants, 280.000 of whom live in rural areas. The region has 16 municipalities. The north of the region is characterised by the Veluwe. The south is part of the Betuwe. The region is known for its horticulture and especially its fruit cultivation.

The Rhine flows into the region from Lobith and splits into Waal, Rijn and IJssel. Some parts of the region also regularly experience high water and therefore have characteristic Dutch dykes along the rivers.

**With Samen Kwiek's platform it's much easier for health care providers to connect inhabitants to the services they need. Working on prevention and healthy behaviour**

## THE CHALLENGES

The ageing population and the increase in people with chronic diseases cast doubts on the care systems' sustainability towards the future. So the demand on health and social care organizations is expected to outgrow its capacity. Also, there is a change in mindset ongoing in society from 'illness & care' to 'health & behaviour'. More and more is asked of the self-reliance and cooperative management of the inhabitants in our region. This requires stronger cooperation between care and welfare; a cross-domain approach in which the residents of our region are central.

## THE SERVICE OFFER

### INSIGHT

Allow comparing regional (health/welfare) needs versus the offering of social and welfare services. This comparison entails coverage, variety of services providers as well as accessibility (like waiting times).

### IMPACT

A reporting tool that summarizes the usage, reviews and (health and social) impact of the activities/services offered by a provider.

### RECOMMENDATION

This service offers an AI-based list of recommended social and/or welfare services using the Positive Health questionnaire's score.

### REFERRAL

An overview of the referrals done towards service providers. Via this service, payers (health insurances and/or regional municipalities) can monitor the level of collaboration across the different lines of care and specialties present in the platform.

### OZOverbindzorg

Professionals can quickly and easily go to the Samen Kwiek platform from OZOverbindzorg without having to log in again. OZOverbindzorg monitors the effect of the use of the Samen Kwiek platform on the network of residents (in OZO).

### TAKTIFY

The automated, intelligent resource planning tool enables healthcare teams to work smarter and collaborate better. This tool is faster, simpler and more integrated than current solutions.

### LIFESIGHT.ME

Lifesight.me provides a simple scientific basis for lifestyle choices. We do this by using AI to give scientific studies a rating based on the reliability of the study.

### ANNE4CARE

Coaches residents at Samen Kwiek to find what they need. Anne asks questions, interprets the answers and gives advice.
